

THE BENEFITS OF ON-SITE SHREDDING

BENEFITS OF ON-SITE SHREDDING SERVICES

PROSHRED®'s ISO certified on-site shredding system procedures reduce these risks and drawbacks by ensuring **all confidential materials are destroyed on your premises** by trained and bonded security professionals while onboard our state-of-the-art mobile shredding trucks.

By giving you the ability to **witness our shredding service via closed circuit monitor**, and by providing an auditable Certificate of Destruction after each shred, we end the chain-of-custody right on-site with you.

VS

RISKS OF OFF-SITE SHREDDING

Document security experts suggest that organizations using haul-away (or off-site) shredding services face increased risk and liability by **severing the chain-of-custody** when disposing of confidential information.

When private information is taken off-site for destruction, confidential materials are often **handled by multiple parties out of sight** of the source organization, thus leaving that organization **vulnerable to error and fraud** that may result in significant financial loss.

HOW ON-SITE SHREDDING WORKS

Our secure shredding process starts from the instant your employees deposit their confidential papers in our locked security consoles. **Based on your service schedule**, our Customer Security Professionals (CSPs) empty your consoles and transport your sensitive information - in a locked wheeled tip cart - to the shredding truck parked outside.

During the entire process, **your paper is never directly handled by our CSPs**. The wheeled tip cart is securely fastened to the chute of the shredding truck and automatically lifted inside the truck to shred your materials into tiny pieces.
